FOR IMMEDIATE RELEASE

Big Things In the Bluegrass... Join Verisurf at CMSC

ANAHEIM, CA - Verisurf Software, Inc., the world leader in model-based metrology software, today announced that it will present new industry technology trends and applications at the CMSC trade conference in Louisville, KY, July 20 – 24.

“This is the premier conference for measurement technology professionals,” explained David Olson, Verisurf Director of Sales and Marketing. “We have made an all-out commitment this year to provide an inside look at the most technically advanced metrology solutions as part of our exhibit presentation.”

Verisurf is scheduled to demonstrate its powerful new Verisurf X Software live at the show using today's newest large-scale laser and radar tracker. “We will also have a variety of other measurement tools and equipment (PCMMs, etc.) 'up and running' so show attendees can see the future of our industry,” Olson said.

Teams of Verisurf technology and software specialists will be available to introduce the company's capabilities, demo the latest metrology solutions, and answer specific questions.

Verisurf Software, Inc. is an advanced technology company that revolutionized manufacturing in the 1990s by providing breakthrough inspection, tool building, reverse engineering, instrument interchangeability and reporting capabilities.
